LS GreenLink Acquires Strategic Site for State-of-the-Art HVDC Cable Facility

LS GreenLink USA, Inc., a wholly-owned subsidiary of **LS Cable & System Ltd.**, has acquired a 96.6 acre site in Chesapeake, VA, USA. The acquisition closed on March 25, 2025. The property represents a key milestone in LS GreenLink's plan to establish the largest submarine power cable manufacturing facility in the USA. This real estate acquisition highlights the company's commitment to establishing a state-of-the-art manufacturing hub to support critical infrastructure projects. The Chesapeake facility, expected to be fully operational by 2028, will serve as a key site for producing high-voltage direct current (HVDC) submarine power cables, essential for connecting offshore wind farms and enhancing the resilience and capacity of power transmission networks.

LS GreenLink's first phase of development, expected to involve more than US\$681 million for the new manufacturing facility should be complete by the Q3 2027 and become fully operational by the Q1 2028. The facility will include a 750,000 ft² manufacturing area and a 660' VCV tower, which is expected to be the tallest structure in the Commonwealth of Virginia. www.lscns.com

Wires & Cables Market to Reach \$375 Billion by 2033, Driven by Renewable Energy & Tech Advancements

ResearchAndMarkets.com report, "Wires and Cables Market Size and Share Analysis-Growth Trends and Forecast Report 2025-2033" says the wires and cables market will rise from US\$228.20 billion in 2024 to US\$375 billion by 2033, at a CAGR of 5.70%. Factors including increasing power demand, technological progress, infrastructure upgrades and evolution of the renewable energy sector are growth drivers. Underpinning this growth is the surging adoption of renewable energy, with focus on harnessing sustainable power sources to mitigate climate change impacts. The shift towards clean energy, coupled with substantial investments in residential and commercial construction projects, has augmented the demand for specialized cables. Technological innovation is also a catalyst driving market growth. Learn more at: www.ResearchAndMarkets.com

Solar Aluminum Cable Project for LS in USA

LS Cable & System and **LS Eco Energy** are strengthening their presence in the USA market, starting with the first supply of MV-grade aluminum power cables. The firms will supply 35 kV aluminum power cables worth US\$25 million to a USA solar EPC company. The cables will be used to build power grids for solar power plants in the USA states of California, New Jersey and Indiana.

Westinghouse & Shawflex Sign MoU for Nuclear

Westinghouse Electric Co. and **Shawflex** have signed a memorandum of understanding (MoU) to support nuclear new-build projects in Canada and globally. Under the agreement, Shawflex has the potential to provide cables, connectors and assemblies for key AP1000®, AP300™ and eVinci™ projects. "Shawflex nuclear wire, cable and assembly products are ideal for Westinghouse's advanced nuclear power projects," said Shawflex VP/GM **Jarrod Shugg**. Westinghouse relies on Shawflex products for its global instrumentation and control production shop in Warrendale, PA, USA.

Hydro Building New Wire Rod Cast House for Low-Carbon Aluminum Cable Solutions

Aluminum and renewable energy company, **Hydro Karmøy**, is investing in building a new wire rod cast house at its aluminum smelter in Karmøy, Norway. The facility will supply aluminum for use in critical energy infrastructure in Europe and is expected to start production in 2028. Hydro Karmøy is one of Europe's largest primary aluminum plants with total annual production of some 270,000 tons of primary aluminium and 220,000 tons of cast house products. "This investment will expand the capacity of wire rod to supply our customers with low-carbon solutions needed to develop and expand Europe's most critical infrastructure. This demonstrates that a productive aluminum industry has good growth opportunities in

Norway," comments **Eivind Kallevik**, President and Chief Executive Officer (CEO) of Hydro Karmøy.

Hydro

The wire rod cast house in Karmøy will have a capacity of 110,000 tons per year. Completion of the cast house facility is scheduled for the first quarter of 2028 and is Hydro's largest investment in Norway in ten years.

The new cast house will produce aluminum wire for power cables in Europe. Aluminum is defined by the EU as a critical material. Norway currently accounts for 40% of the aluminum produced in Europe.

With the new wire rod cast house, Hydro can produce more aluminum wire for a rapidly growing market.

Prysmian's 245 kV Cable System for Floating Offshore Wind Projects

Prysmian, Milan, Italy, has made a significant breakthrough to accelerate the roll-out of floating offshore wind projects. Floating offshore wind, a technology which opens wind-power generation to previously unreachable areas due to the deep seabed, will be significantly boosted by this breakthrough, as Prysmian can provide high voltage dynamic cable systems that have been tailor-made for such conditions.

Prysmian's new 245 kV HVAC dynamic cable system will ensure that offshore wind projects will benefit from superior resistance, high mechanical

performances and above all, boosted reliability to overcome the extremely challenging conditions at sea caused by the constant stress due to water currents and harsh conditions at sea. Prysmian is the first player in the market to have such a full portfolio of dynamic cable systems from 72.5 kV inter-array to 245 kV export tail cables. www.prysmian.com

Nexans in Negotiations for the Sale of Lynxco

Nexans has entered exclusive negotiations for the sale of its industrial cable division, **Lynxco**, to **Latour Capital**, a France-based private equity fund, for an Enterprise Value of €525 million. This proposed transaction would mark Nexans' exit from the specialty industrial cables activity in line with its strategy to refocus as a Pure Electrification Player. Lynxco offers specialty industrial cables with annual standard sales of over €700 million.

Sumitomo Electric Secures HVDC Cable Contract with National Grid UK

Sumitomo Electric Industries, Ltd. has been awarded an HVDC cable framework contract from **National Grid** to deliver future HVDC subsea power cables projects in the UK. The cables will be made in Sumitomo's state-of-the-art factory in the northeast of Scotland and currently under construction, further contributing to the UK economy, its employment strategy and Energy Transition goals. The cable factory will employ 150 full-time workers, with double that count in the future.

Prysmian & Edison Energia sign multi-year agreement to supply renewable energy

Prysmian and Edison Energia, an Edison Group company, signed a multi-year Corporate Power Purchase Agreement (PPA) for the supply of 100% renewable energy. This supports Prysmian's commitment to sustainability and reducing CO₂ emissions. Edison Energia will supply 25% of Prysmian's annual electricity consumption in Italy. The electricity will come from a photovoltaic plant in Viterbo, Italy, with total installed capacity of 150 MWp.

LS Cable & System Signs HVDC Supply Contract With UK National Grid

LS Cable & System has signed a framework contract with the UK's **National Grid** to supply high-voltage direct current (HVDC) cables. The National Grid, which oversees the UK's power grid, is building large-scale transmission infrastructure on the UK mainland and in the North Sea region. It plans to install cables for a total of 15 projects over the next eight years with a budget of around £21.3 billion for these projects.

This framework contract was intended to select key suppliers in advance and establish a long-term cooperation system before proceeding with individual projects. Six suppliers from Europe, Japan and other countries including LS Cable & System, participated in the

contract, and project-specific contracts will be signed separately in the future. LS Cable & System will participate in individual projects in the future and perform supply, installation and connection construction for submarine and underground HVDC cables.

LS Cable & System developed HVDC cable technology in Korea in 2007 and the company has successfully completed all domestic HVDC projects including the Bukdangjin-Godeok Projects 1 and 2, and linkage of Jeju Projects 2 and 3.

Additionally, the company has recorded orders for HVDC projects worth more than 3 trillion won overseas including in the UK and Germany.

Nexans Wins Major Frame Agreement with RTE to Supply HV Cables for Offshore Wind Farms in France

Nexans has secured a major framework agreement with **RTE (Réseau de Transport d'Electricité)**, France's Transmission System Operator, that includes supply, installation and commissioning of 450 km of high-voltage direct current (HVDC) subsea cables and 280 km of high-voltage direct current (HVDC) onshore cables to support connection of three offshore wind farms, the Center Manche 1 & 2 and Oléron, to the French transmission network. The value of

the agreement is above €1 billion, depending on the final quantities to be agreed upon and the subcontractors to be appointed during the next phase leading to the signature of each EPCI contract. Nexans continues to play a central role in Europe's energy transition efforts, supplying high-voltage cables to meet growing demands. The agreement aligns with France's offshore wind targets of achieving 45 GW of capacity by 2050.
www.nexans.com

begin by the end of 2025 to meet growing demand for the company's advanced conductor technology that enables utilities to double or triple transmission capacity while cutting costs for customers.

The announcement adds momentum to the record growth of South Carolina's manufacturing sector. The three-phase project represents a total investment of US\$134 million

and is expected to create approximately 462 advanced manufacturing jobs with good wages.
